

# NUTRITION EDUCATION PROGRAM

## 2016 ANNUAL REPORT

### OUR FOCUS

The Kentucky Nutrition Education Program works in all 120 counties to improve the lives of limited-resource Kentuckians through education and changes in behavior and in community. Through the Supplemental Nutrition Assistance Program Education (SNAP-Ed) and the Expanded Food and Nutrition Education Program (EFNEP), the University of Kentucky Cooperative Extension Service has agents and nutrition assistants across the state who are dedicated to improving lives in their communities.

### OUR CHALLENGE

#### Poverty

In Kentucky, household median income is **\$45,215**, which is much lower than the U.S. median of **\$55,775**.<sup>1</sup> Kentucky has high rates of poverty and food insecurity when compared to the United States as a whole.<sup>1</sup>

	Kentucky	U.S.
<b>Total Poverty</b>	18.5%	14.7%
<b>Child Poverty</b>	25.9%	20.7%
<b>Food Insecurity</b>	17.6%	13.7%
<b>Very Low Food Secure</b>	7.3%	5.4%

In 2014, an estimated **2,339** Green County residents lived in poverty, and **670** of them were children. This is a **19.5%** increase in total poverty and **2.9%** increase in child poverty since 2007.<sup>2</sup>

#### SNAP benefits

Participation in the SNAP program among those who are eligible for its benefits is higher in Kentucky than in the U.S. as a whole.<sup>1</sup>

In 2015, **1,846** Green County residents received SNAP benefits, a **32.3%** increase since 2007.<sup>3</sup>

	Kentucky	U.S.
<b>SNAP Participation</b>	91%	83%

#### Obesity

Nearly half of all American adults experience one or more preventable, diet-related chronic conditions, such as high blood pressure, cardiovascular disease, type 2 diabetes, and obesity.<sup>4</sup> Kentucky has a high prevalence of hypertension, diabetes, and obesity, ranking in the top 10 when compared to other states.<sup>5</sup> A large body of evidence shows that healthy eating habits and regular physical activity can help people achieve and maintain good health and reduce the risk of chronic disease throughout life.<sup>4</sup>

In 2013, **3,250** Green County residents were considered obese, representing **38.1% (45.5%-31.6%)** of the county's population.<sup>6</sup>

## OUR SOLUTION

Provide hands-on, nutrition education to limited-resource audiences, focusing on:

- Buying and preparing healthy foods
- Developing new meal planning and cooking skills
- Adopting new healthy lifestyle behaviors
- Managing SNAP resources

In 2016, **2,803** Green County residents with limited resources participated in nutrition education lessons.

## OUR RESULTS

### IN KENTUCKY

#### Lifestyle improvements

In 2016, **95%** of adult participants made a positive change in food group choices and **71%** showed improvement in one or more food safety practices. In addition, **65%** began to plan meals in advance more often and **71%** used the “Nutrition Facts” on food labels to make food choices more often. Youth participants also experienced behavior changes, with **83%** improving their ability to choose healthy foods.

## OUR SUCCESS

### Residents improve food preservation skills

The residents of Greensburg, in Green County expressed an interest in a Food Preservation Workshop. Residents said they would like to learn more about food preservation techniques in order to gain confidence before doing their own home food preservation of this year’s summer bounty. The Green County Cooperative Extension agent for Family and Consumer Sciences along with a team of food preservationists from the SNAP-Education program at the University of Kentucky held a three-day, hands-on Food Preservation Workshop. Participants gained experiential knowledge about pressure canning, drying, freezing basics, and boiling water canning. Participants canned green beans, dried apple slices, and preserved homemade salsa, jams, and jellies. Before beginning the workshop, **66%** of participants said they had a desire to learn how to do home canning and **34%** reported they already felt confident enough to do home canning. During the workshop, all reported learning something about food preservation, **77%** reported that their skill level increased and all reported that they would make some changes when preserving foods.
