

Our Focus

The Nutrition Education Program works in all 120 counties to improve the lives of limited-resource Kentuckians through education and changes in behavior and in their community. Through the Supplemental Nutrition Assistance Program Education (SNAP-Ed) and the Expanded Food and Nutrition Education Program (EFNEP), the University of Kentucky Cooperative Extension Service has agents and nutrition assistants across the state who are dedicated to improving lives where they live.

Our Challenge

Poverty

According to US Census estimates for 2016, the median household income in Kentucky is **\$46,610**, almost 20% lower than the U.S. median household income of **\$57,617**.¹ Kentucky also has higher percentages of poverty and food insecurity among its population compared to census estimate for the United States overall.

	Kentucky	U.S.
Total Poverty	17.2%	12.3%
Child Poverty	24.4%	19.5%
Food Insecurity	14.7%	11.8%

In 2016, an estimated **1,660** Crittenden County residents lived in poverty, and **612** of those were children under 18. This represents a **1.3%** increase in total poverty and **7.4%** increase in child poverty since 2008.¹

Obesity

Today, about half of all Americans have one or more chronic diseases, often related to poor diet.² These include high blood pressure, cardiovascular disease, type 2 diabetes and stroke which are often associated with obesity.

In 2017, the percentage of obese adults in Kentucky was **34.3%**, ranking it in the top 10 states for highest obesity rates in the country. Kentucky was also ranked in the top 10 for high percentages of adults with diabetes (**12.9%**) and adults with hypertension (**39.4%**).³ A large body of evidence shows that healthy eating habits and regular physical activity can help people achieve and maintain good health and reduce the risk of chronic disease throughout life.²

In 2014, **32.6%** of Crittenden County's adult population were considered obese.⁴

Our Solution

Provide hands-on, nutrition education to limited-resource audiences, focusing on:

- Buying and preparing healthy foods
- Developing new meal planning and cooking skills
- Adopting new healthy lifestyle behaviors
- Managing SNAP resources

In 2018, 1,791 Crittenden County residents with limited resources participated in nutrition education lessons.

Our Results

IN CRITTENDEN COUNTY

Lifestyle improvements

In 2018, 100% of adult participants made a positive change in food group choices and 94% showed improvement in one or more food safety practices. In addition, 89% showed improvement in one or more food resource management practices and 75% made changes to be more physically active. Youth participants also experienced behavior changes, with 72% improving their ability to choose healthy foods.

Our Success

Overcoming food insecurity with nutrition education classes

The Crittenden County Extension Service partnered with the Inter Agency Council of Crittenden County to help provide food and holiday gifts to limited-resource families in the county. To qualify for the program, the families had to attend three classes on such topics as food and nutrition, gardening, resume writing and finance management. The Expanded Food and Nutrition Education Program assistant offered two separate classes on food budgeting. Twenty families attended these classes. Participants learned how to make a shopping list, prepare a weekly menu, check weekly specials at the local grocery stores and stretch their meals using less expensive foods (i.e., substituting beans for meat). They also learned how to use coupons to purchase the items they need for their planned meals. At the end of the class, 90% said they had learned how to prepare better meals on a budget and stretch their food dollars so they did not run out of food before the end of the month. Participants also stated they would recommend the class to their friends.
