

Our Focus

The Nutrition Education Program works in all 120 counties to improve the lives of limited-resource Kentuckians through education and changes in behavior and in their community. Through the Supplemental Nutrition Assistance Program Education (SNAP-Ed) and the Expanded Food and Nutrition Education Program (EFNEP), the University of Kentucky Cooperative Extension Service has agents and nutrition assistants across the state who are dedicated to improving lives where they live.

Our Challenge

Poverty

According to US Census estimates for 2016, the median household income in Kentucky is **\$46,610**, almost 20% lower than the U.S. median household income of **\$57,617**.¹ Kentucky also has higher percentages of poverty and food insecurity among its population compared to census estimate for the United States overall.

	Kentucky	U.S.
Total Poverty	17.2%	12.3%
Child Poverty	24.4%	19.5%
Food Insecurity	14.7%	11.8%

In 2016, an estimated **2,820** Harrison County residents lived in poverty, and **985** of those were children under 18. This represents a **0.6%** increase in total poverty and **6.9%** increase in child poverty since 2008.¹

Obesity

Today, about half of all Americans have one or more chronic diseases, often related to poor diet.² These include high blood pressure, cardiovascular disease, type 2 diabetes and stroke which are often associated with obesity.

In 2017, the percentage of obese adults in Kentucky was **34.3%**, ranking it in the top 10 states for highest obesity rates in the country. Kentucky was also ranked in the top 10 for high percentages of adults with diabetes (**12.9%**) and adults with hypertension (**39.4%**).³ A large body of evidence shows that healthy eating habits and regular physical activity can help people achieve and maintain good health and reduce the risk of chronic disease throughout life.²

In 2014, **34.3%** of Harrison County's adult population were considered obese.⁴

Our Solution

Provide hands-on, nutrition education to limited-resource audiences, focusing on:

- Buying and preparing healthy foods
- Developing new meal planning and cooking skills
- Adopting new healthy lifestyle behaviors
- Managing SNAP resources

In 2018, **10,681** Harrison County residents with limited resources participated in nutrition education lessons.

Our Results

IN HARRISON COUNTY

Lifestyle improvements

In 2018, **93%** of adult participants made a positive change in food group choices and **89%** showed improvement in one or more food safety practices. In addition, **82%** showed improvement in one or more food resource management practices and **86%** made changes to be more physically active. Youth participants also experienced behavior changes, with **50%** improving their ability to choose healthy foods.

Our Success

Super Star Chef camp helps kids shine in the kitchen

Super Star Chef is a program designed to teach or enrich cooking skills and enhance food and kitchen safety skills. It also increases the understanding of food labels and helps participants discover foods that are healthy and nourishing to the body. The Harrison County Cooperative Extension Service offered the class to community youth ages 9 to 18. Overall, pre-test and post-test comparisons showed that the program enhanced participants' understanding of the nutrition concepts covered. Pre-test and post-test analysis showed that participants' cooking self-efficacy increased from 26.89 in the pre-test to 30.00 in the post-test (out of a maximum of 32). The post-test also included eight self-assessment of learning gains items. All the respondents agreed/strongly agreed that they learned how to wash their hands to remove germs; how to measure ingredients; how to correctly hold a knife for cutting; and how germs can be transferred to food.
