

Our Focus

The Nutrition Education Program works in all 120 counties to improve the lives of limited-resource Kentuckians through education and changes in behavior and in their community. Through the Supplemental Nutrition Assistance Program Education (SNAP-Ed) and the Expanded Food and Nutrition Education Program (EFNEP), the University of Kentucky Cooperative Extension Service has agents and nutrition assistants across the state who are dedicated to improving lives where they live.

Our Challenge

Poverty

According to US Census estimates for 2016, the median household income in Kentucky is **\$46,610**, almost 20% lower than the U.S. median household income of **\$57,617**.¹ Kentucky also has higher percentages of poverty and food insecurity among its population compared to census estimate for the United States overall.

	Kentucky	U.S.
Total Poverty	17.2%	12.3%
Child Poverty	24.4%	19.5%
Food Insecurity	14.7%	11.8%

In 2016, an estimated **2,409** Monroe County residents lived in poverty, and **820** of those were children under 18. This represents a **9.8%** decrease in total poverty and **3.1%** decrease in child poverty since 2008.¹

Obesity

Today, about half of all Americans have one or more chronic diseases, often related to poor diet.² These include high blood pressure, cardiovascular disease, type 2 diabetes and stroke which are often associated with obesity.

In 2017, the percentage of obese adults in Kentucky was **34.3%**, ranking it in the top 10 states for highest obesity rates in the country. Kentucky was also ranked in the top 10 for high percentages of adults with diabetes (**12.9%**) and adults with hypertension (**39.4%**).³ A large body of evidence shows that healthy eating habits and regular physical activity can help people achieve and maintain good health and reduce the risk of chronic disease throughout life.²

In 2014, **34.2%** of Monroe County's adult population were considered obese.⁴

Our Solution

Provide hands-on, nutrition education to limited-resource audiences, focusing on:

- Buying and preparing healthy foods
- Developing new meal planning and cooking skills
- Adopting new healthy lifestyle behaviors
- Managing SNAP resources

In 2018, 6,562 Monroe County residents with limited resources participated in nutrition education lessons.

Our Results

IN KENTUCKY

Lifestyle improvements

In 2018, 95% of adult participants made a positive change in food group choices and 91% showed improvement in one or more food safety practices. In addition, 90% showed improvement in one or more food resource management practices and 83% made changes to be more physically active. Youth participants also experienced behavior changes, with 83% improving their ability to choose healthy foods.

Our Success

Fit for Life provides an all-encompassing program for participants

In Monroe County, 23.6% of adult residents report poor or fair health and 11.9% of adults have diabetes. In addition, 33.6% are physically inactive. The Monroe County 4-H and Family and Consumer Science agents found the need for a program that taught Monroe County residents the connection between nutrition, physical activity and meal planning. The program was called Fit for Life and covered topics such as food journaling, body mass index, incorporating physical activity into everyday life and the benefits of group physical activity. Twenty-four participants registered for the six-week program. Among the outcomes: 87% of participants noted they made healthier changes in their food choices, saying they eat more fruits and vegetables, limit their sugar intake and try to pay more attention to their decisions; 100% of evaluated participants said they increased their water intake; and 75% said they increased their physical activity. One participant lost 16 pounds and attributed that change to the healthier habits learned through Fit for Life participation. Participants report that they walk more, have more stamina, feel better and have better mobility after participation in Fit for Life.
