

Our Focus

The Kentucky Nutrition Education Program, as part of the University of Kentucky Cooperative Extension Service, encompasses two separate USDA programs:

The Expanded Food and Nutrition Education Program (EFNEP) and the Supplemental Nutrition Assistance Program Education (SNAP-Ed). Both programs utilize agents and assistants to provide educational opportunities for limited-resource individuals and families to acquire knowledge, develop skills, and change behaviors for improved health and well-being.

Our Challenge

Poverty

According to US Census estimates for 2017, the median household income in Kentucky is \$48,332, almost 20% lower than the U.S. median household income of \$60,336. Kentucky also has higher percentages of poverty and food insecurity among its population compared to census estimate for the United States overall.

	Kentucky	U.S.
Total Poverty	17.1%	13.4%
Child Poverty	22.1%	18.4%
Food Insecurity	14.7%	12.3%

In 2017, an estimated **3,818** Casey County residents lived in poverty, and an estimated **1,147** were children under 18.¹

Obesity

Today, about half of all Americans have one or more chronic diseases, often related to poor diet and physical inactivity.² These include high blood pressure, cardiovascular disease, type 2 diabetes and stroke.

In 2017, the percentage of obese adults in Kentucky was 34.3%, ranking it in the top 10 states for highest obesity rates in the country. The percentage of physically inactive Kentuckians was 34.4%, ranking it as the most physically inactive state in the nation. Kentucky was also ranked in the top 10 for high percentages of adults with diabetes (12.9%) and adults with hypertension (39.4%). A large body of evidence shows that healthy eating habits and regular physical activity can help people achieve and maintain good health and reduce the risk of chronic disease throughout life.²

In 2015, **37.9%** of Casey County's adult population were considered obese, and **28.9%** were considered physically inactive.⁴

Our Solution

Provide hands-on, nutrition education to limited-resource audiences, focusing on:

- Buying and preparing healthy foods
- Developing new meal planning and cooking skills
- Adopting new healthy lifestyle behaviors
- Managing SNAP resources

In 2019, **4,953** contacts were made with Casey County residents who participated in nutrition education programming.

Our Results

IN KENTUCKY

Lifestyle improvements

In 2019, 97% of adult participants made a positive change in food group choices and 83% showed improvement in one or more food safety practices. In addition, 92% showed improvement in one or more food resource management practices and 90% made changes to be more physically active. Youth participants also experienced behavior changes, with 87% improving their ability to choose healthy foods.

Our Success

Smarter Lunchroom in Casey County

nly 25.6% of middle and high schools in Kentucky offer salad bars compared to 44.8% nationwide, according to 2016 data from the CDC. To address concerns about health and obesity in Kentucky, the Casey County 4-H Extension agent partnered with Casey County Middle Schools' food service in early 2019 to implement Smarter Lunchrooms interventions in the cafeteria. They focused on vegetables and included two varieties in separate locations on the line, placing the vegetable or salad first and offering/displaying vegetables in attractive containers at eye level. Cafeteria staff reminded students to pick a fruit or vegetable if not already on their plate. The majority of students had a least one fruit and/or vegetable on their plate without needing reminding. They also offered a salad bar on Wednesdays and Fridays. These changes were implemented along with promotional posters, aprons for staff, and other supporting marketing materials for at least six weeks. A positive environmental change was affected at the school and a successful collaboration was achieved between the Cooperative Extension and Casey County Middle School.
