

## Our Focus

The Kentucky Nutrition Education Program, as part of the University of Kentucky Cooperative Extension Service, encompasses two separate USDA programs: The Expanded Food and Nutrition Education Program (EFNEP) and the Supplemental Nutrition Assistance Program Education (SNAP-Ed). Both programs utilize agents and assistants to provide educational opportunities for limited-resource individuals and families to acquire knowledge, develop skills, and change behaviors for improved health and well-being.

## Our Challenge

### Poverty

According to US Census estimates for 2017, the median household income in Kentucky is **\$48,332**, almost 20% lower than the U.S. median household income of **\$60,336**.<sup>1</sup> Kentucky also has higher percentages of poverty and food insecurity among its population compared to census estimate for the United States overall.

	Kentucky	U.S.
<b>Total Poverty</b>	17.1%	13.4%
<b>Child Poverty</b>	22.1%	18.4%
<b>Food Insecurity</b>	14.7%	12.3%

In 2017, an estimated **5,101** Lawrence County residents lived in poverty, and an estimated **1,430** were children under 18.<sup>1</sup>

### Obesity

Today, about half of all Americans have one or more chronic diseases, often related to poor diet and physical inactivity.<sup>2</sup> These include high blood pressure, cardiovascular disease, type 2 diabetes and stroke.

In 2017, the percentage of obese adults in Kentucky was **34.3%**, ranking it in the top 10 states for highest obesity rates in the country. The percentage of physically inactive Kentuckians was **34.4%**, ranking it as the most physically inactive state in the nation. Kentucky was also ranked in the top 10 for high percentages of adults with diabetes (**12.9%**) and adults with hypertension (**39.4%**).<sup>3</sup> A large body of evidence shows that healthy eating habits and regular physical activity can help people achieve and maintain good health and reduce the risk of chronic disease throughout life.<sup>2</sup>

In 2015, **39%** of Lawrence County's adult population were considered obese, and **33.6%** were considered physically inactive.<sup>4</sup>

## Our Solution

Provide hands-on, nutrition education to limited-resource audiences, focusing on:

- Buying and preparing healthy foods
- Developing new meal planning and cooking skills
- Adopting new healthy lifestyle behaviors
- Managing SNAP resources

In 2019, **11,418** contacts were made with Lawrence County residents who participated in nutrition education programming.

## Our Results

### IN LAWRENCE COUNTY

#### Lifestyle improvements

In 2019, **98%** of adult participants made a positive change in food group choices and **69%** showed improvement in one or more food safety practices. In addition, **98%** showed improvement in one or more food resource management practices and **91%** made changes to be more physically active. Youth participants also experienced behavior changes, with **97%** improving their ability to choose healthy foods.

## Our Success

### LEAP to Good Nutrition

**T**he SNAP-Ed assistant partnered with Blaine Elementary School to provide the LEAP program to 54 students in kindergarten through second-grade. Six approved LEAP books were read to the students. A healthy snack, related to the book's message, was provided to each student. The importance of being physically active each day was discussed and a reinforcement item was given to each student to take home. Before and after surveys completed by students revealed the following results: 81% improved their hand-washing before eating; 79% chose healthier snacks; and 75% increased their physical activity.
