

Our Focus

The Kentucky Nutrition Education Program, as part of the University of Kentucky Cooperative Extension Service, encompasses two separate USDA programs: The Expanded Food and Nutrition Education Program (EFNEP) and the Supplemental Nutrition Assistance Program Education (SNAP-Ed). Both programs utilize agents and assistants to provide educational opportunities for limited-resource individuals and families to acquire knowledge, develop skills, and change behaviors for improved health and well-being.

Our Challenge

Poverty

According to US Census estimates for 2017, the median household income in Kentucky is **\$48,332**, almost 20% lower than the U.S. median household income of **\$60,336**.¹ Kentucky also has higher percentages of poverty and food insecurity among its population compared to census estimate for the United States overall.

	Kentucky	U.S.
Total Poverty	17.1%	13.4%
Child Poverty	22.1%	18.4%
Food Insecurity	14.7%	12.3%

In 2017, an estimated **1,008** Lyon County residents lived in poverty, and an estimated **233** were children under 18.¹

Obesity

Today, about half of all Americans have one or more chronic diseases, often related to poor diet and physical inactivity.² These include high blood pressure, cardiovascular disease, type 2 diabetes and stroke.

In 2017, the percentage of obese adults in Kentucky was **34.3%**, ranking it in the top 10 states for highest obesity rates in the country. The percentage of physically inactive Kentuckians was **34.4%**, ranking it as the most physically inactive state in the nation. Kentucky was also ranked in the top 10 for high percentages of adults with diabetes (**12.9%**) and adults with hypertension (**39.4%**).³ A large body of evidence shows that healthy eating habits and regular physical activity can help people achieve and maintain good health and reduce the risk of chronic disease throughout life.²

In 2015, **29.3%** of Lyon County's adult population were considered obese, and **28.5%** were considered physically inactive.⁴

Our Solution

Provide hands-on, nutrition education to limited-resource audiences, focusing on:

- Buying and preparing healthy foods
- Developing new meal planning and cooking skills
- Adopting new healthy lifestyle behaviors
- Managing SNAP resources

In 2019, 4,311 contacts were made with Lyon County residents who participated in nutrition education programming.

Our Results

IN KENTUCKY

Lifestyle improvements

In 2019, 97% of adult participants made a positive change in food group choices and 83% showed improvement in one or more food safety practices. In addition, 92% showed improvement in one or more food resource management practices and 90% made changes to be more physically active. Youth participants also experienced behavior changes, with 87% improving their ability to choose healthy foods.

Our Success

Senior Citizen in Lyon County Get Healthier

According to the World Health Organization, senior adults are particularly vulnerable to malnutrition. Many of the diseases suffered by older adults result from poor diets that may have begun in infancy and are compounded by aging. To help senior adults learn more about the positive effects of good nutrition, monthly lessons are conducted at the Lyon County Senior Center. Participants join in hands-on classes that address topics such as high cholesterol, diabetes, high blood pressure, and more. Both men and women who attended the programs indicated they have used the information they've learned to reduce their fat, sodium, and sugar intake. They have also indicated exercising more, as well as an interest in trying new and different foods. Because of the importance of these programs, the senior citizens board awarded a grant to the Lyon County Extension Family and Consumer Sciences program to ensure the monthly lessons continue.
