

# KENTUCKY NUTRITION EDUCATION PROGRAM

## 2020 ANNUAL REPORT: GARRARD COUNTY

### OUR FOCUS

The Kentucky Nutrition Education Program, as part of the University of Kentucky Cooperative Extension Service, encompasses two separate USDA programs: The Expanded Food and Nutrition Education Program (EFNEP) and the Supplemental Nutrition Assistance Program Education (SNAP-Ed). Both programs utilize agents and assistants to provide educational opportunities for limited-resource individuals and families to acquire knowledge, develop skills, and change behaviors for improved health and well-being.

### OUR CHALLENGE

#### Poverty

According to U.S. Census estimates for 2019, the median household income in Kentucky is **\$52,256**, 20% lower than the U.S. median household income of **\$65,712**.<sup>1</sup> Kentucky also has higher percentages of poverty and food insecurity among its population compared to census estimates for the United States overall.

	Kentucky	U.S.
<b>Total Poverty</b> <sup>1</sup>	16.0%	12.3%
<b>Child Poverty</b> <sup>1</sup>	20.9%	16.8%
<b>Food Insecurity</b> <sup>2</sup> <i>(Actual ratings during COVID-19 may be higher)</i>	14.7%	11.7%

In 2018, an estimated **16.1%** of Garrard County residents lived in poverty, and an estimated **23.5%** were children younger than 18.<sup>1</sup>

#### Obesity

Today, about half of all Americans have one or more chronic diseases, often related to poor diet and physical inactivity.<sup>3</sup> These include high blood pressure, cardiovascular disease, type 2 diabetes, and stroke.

In 2019, the percentage of obese adults in Kentucky was **36.5%**, ranking it in the top 10 states for highest obesity rates in the country. The percentage of physically inactive Kentuckians was **30.6%**, ranking it among the top five most physically inactive states in the nation. Kentucky was also ranked in the top 10 for high percentages of adults with diabetes (**13.3%**) and adults with hypertension (**40.9%**).<sup>4</sup> A large body of evidence shows that healthy eating habits and regular physical activity can help people achieve and maintain good health and reduce the risk of chronic disease throughout life.<sup>3</sup>

In 2020, **39%** of Garrard County's adult population was considered obese, and **27%** was considered physically inactive.<sup>5</sup>

## OUR SOLUTION

Provide hands-on nutrition education to limited-resource audiences, focusing on:

- Buying and preparing healthy foods
- Developing new meal planning and cooking skills
- Adopting new healthy lifestyle behaviors
- Managing SNAP resources

In 2020, 23,904 contacts were made with Garrard County residents who participated in nutrition education programming.

## OUR RESULTS

### IN GARRARD COUNTY

#### Lifestyle improvements

In 2020, 100% of adult participants made a positive change in food group choices and 100% showed improvement in one or more food safety practices. In addition, 100% showed improvement in one or more food resource management practices and 77% made changes to be more physically active.

## OUR SUCCESS

### Delivering nutrition education with student meals

Garrard County enrolls 1,135 students in its school system. In late March 2020, because of COVID-19 pandemic restrictions, in-person learning stopped. The Garrard County Cooperative Extension Nutrition Education Program Assistant and the Family and Consumer Sciences Agent determined a way to continue to reach out to the children in our county. We developed fun newsletters which included coloring sheets for the younger kids, word search puzzles for the older kids and the parents, and always a healthy kid-friendly recipe. We were able to continue to educate the children of our county by providing this resource for 75% of the children enrolled in Garrard County schools. The schools were glad to have these newsletters to provide a healthy activity to include with the lunches served to the children of our county.
