

KENTUCKY NUTRITION EDUCATION PROGRAM

2020 ANNUAL REPORT: GREEN COUNTY

OUR FOCUS

The Kentucky Nutrition Education Program, as part of the University of Kentucky Cooperative Extension Service, encompasses two separate USDA programs: The Expanded Food and Nutrition Education Program (EFNEP) and the Supplemental Nutrition Assistance Program Education (SNAP-Ed). Both programs utilize agents and assistants to provide educational opportunities for limited-resource individuals and families to acquire knowledge, develop skills, and change behaviors for improved health and well-being.

OUR CHALLENGE

Poverty

According to U.S. Census estimates for 2019, the median household income in Kentucky is **\$52,256**, 20% lower than the U.S. median household income of **\$65,712**.¹ Kentucky also has higher percentages of poverty and food insecurity among its population compared to census estimates for the United States overall.

	Kentucky	U.S.
Total Poverty ¹	16.0%	12.3%
Child Poverty ¹	20.9%	16.8%
Food Insecurity ² <i>(Actual ratings during COVID-19 may be higher)</i>	14.7%	11.7%

In 2018, an estimated **18.0%** of Green County residents lived in poverty, and an estimated **26.1%** were children younger than 18.¹

Obesity

Today, about half of all Americans have one or more chronic diseases, often related to poor diet and physical inactivity.³ These include high blood pressure, cardiovascular disease, type 2 diabetes, and stroke.

In 2019, the percentage of obese adults in Kentucky was **36.5%**, ranking it in the top 10 states for highest obesity rates in the country. The percentage of physically inactive Kentuckians was **30.6%**, ranking it among the top five most physically inactive states in the nation. Kentucky was also ranked in the top 10 for high percentages of adults with diabetes (**13.3%**) and adults with hypertension (**40.9%**).⁴ A large body of evidence shows that healthy eating habits and regular physical activity can help people achieve and maintain good health and reduce the risk of chronic disease throughout life.³

In 2020, **35%** of Green County's adult population was considered obese, and **30%** was considered physically inactive.⁵

OUR SOLUTION

Provide hands-on nutrition education to limited-resource audiences, focusing on:

- Buying and preparing healthy foods
- Developing new meal planning and cooking skills
- Adopting new healthy lifestyle behaviors
- Managing SNAP resources

In 2020, 3,611 contacts were made with Green County residents who participated in nutrition education programming.

OUR RESULTS

IN KENTUCKY

Lifestyle improvements

In 2020, 96% of adult participants made a positive change in food group choices and 75% showed improvement in one or more food safety practices. In addition, 92% showed improvement in one or more food resource management practices and 83% made changes to be more physically active.

OUR SUCCESS

LEAP online

When the early release of schools because of the COVID-19 pandemic prevented the LEAP (Literacy, Eating and Activity for Preschool) program from continuing in-person, a virtual approach allowed preschool-aged children to continue to LEAP. This, in turn, helped others in their families receive the information too. The Green County Cooperative Extension Agent for Family and Consumer Sciences and a Green County Primary School preschool teacher collaborated to offer an online LEAP session for families to participate in. For the online LEAP session, families received the featured activity ahead of time to allow them to gather needed supplies. Once online, preschool children and their families could listen to the book “Pizza at Sally’s” and then were instructed how to make a healthy pizza. Seventeen preschool-aged children participated in the online LEAP session. All children could show off their healthy pizzas to their classmates. After the session, all of the families reported that they enjoyed the session and that they were excited to learn ways to make healthy pizzas.
